

ORIGIN
the next step in RIS™

THE RADIOLOGY INFORMATION NETWORK

We designed ORIGIN to be the only system you need to run your imaging center. Origin is a seamless combination of practice management and electronic medical records (EMR).. And the information network is a built right into the foundation of ORIGIN, - not tacked on, allowing secure access to images and reports outside the physical boundaries of your clinic, extending out to the referring physician community.

Integrating the referring physicians in your EMR enables you to provide better service: no unnecessary phone calls, faster response to orders. Better service builds customer loyalty. No expensive additional hardware or complicated software is needed. All you need to do is register your referral base into ORIGIN and you are ready to go.

Referring physicians are provided with a powerful gateway to your radiological services. It begins with a familiar, easy to use electronic order form. Tracking orders is easy with real-time status monitoring. Finally, instant, automatic email notification and web access to diagnostic reports and key images completes the turnaround in the shortest possible time. Make your referring physicians better, more efficient doctors and they will prefer your imaging center every time.
